

The screenshot shows the Visual Studio Code editor with the file explorer on the left displaying the project structure. The main editor window shows the `models.py` file with the `PayrollEmployee` model definition. The model includes fields for employee identification, personal details, company information, and financial data.

```
class payrollEmployee(models.Model):
    employeeid = models.AutoField(primary_key=True)
    cid = models.ForeignKey(company, on_delete=models.CASCADE)
    title = models.CharField(max_length=100)
    firstname = models.CharField(max_length=100)
    lastname = models.CharField(max_length=100)
    alias = models.CharField(max_length=100)
    company = models.CharField(max_length=100)
    location = models.CharField(max_length=100)
    gsttype = models.CharField(max_length=100)
    gstin = models.CharField(max_length=100)
    panno = models.CharField(max_length=100)
    openbalance = models.CharField(max_length=100)
    email = models.CharField(max_length=100)
    website = models.CharField(max_length=100)
    mobile = models.CharField(max_length=100)
    employees = models.CharField(max_length=100)
    joindate = models.CharField(max_length=100)
    image = models.CharField(max_length=100)
    salarydetails = models.CharField(max_length=100)
    effectivefrom = models.CharField(max_length=100)
    hours = models.CharField(max_length=100)
    rate = models.CharField(max_length=100)
    amount = models.CharField(max_length=100)
```

The terminal at the bottom shows a GET request to `/app1/styles.css` with a status of 404.

This screenshot shows the same Visual Studio Code editor with the `models.py` file, but displaying a different set of model fields. The fields include personal and contact information, as well as financial and identification details.

```
amount = models.CharField(max_length=100)
employeeeno = models.CharField(max_length=100)
designation = models.CharField(max_length=100)
function = models.CharField(max_length=100)
gender = models.CharField(max_length=100)
dateofbirth = models.CharField(max_length=100)
bloodgroup = models.CharField(max_length=100)
fathersmothersname = models.CharField(max_length=100)
spousename = models.CharField(max_length=100)
address = models.CharField(max_length=100)
generalemail = models.CharField(max_length=100)
generalphone = models.CharField(max_length=100)
bankdetails = models.CharField(max_length=100)
acno = models.CharField(max_length=100)
ifsc = models.CharField(max_length=100)
bankname = models.CharField(max_length=100)
branchname = models.CharField(max_length=100)
transactiontype = models.CharField(max_length=100)
pannumber = models.CharField(max_length=100)
universalaccountnumber = models.CharField(max_length=100)
pfaccountnumber = models.CharField(max_length=100)
praccountnumber = models.CharField(max_length=100)
esinumber = models.CharField(max_length=100)
street = models.CharField(max_length=100)
city = models.CharField(max_length=100)
state = models.CharField(max_length=100)
```

The terminal at the bottom shows the same GET request to `/app1/styles.css` with a status of 404.
